

IntraCalferol

Reg. V33975
Act 36/1947

Did you know
that **vitamin D** is key
to optimizing calcium
absorption?

INTRA CALFEROL LEADING IN LEG AND EGG SHELL STRENGTH

Optimal intestinal absorption of fundamental minerals and nutrients is essential to achieve the full economic potential of modern poultry.

Vitamin D3 is key to the maintenance of calcium homeostasis by stimulating its absorption and uptake. Deficiencies of this mineral can result in sub-optimal skeletons and eggshells.

5 REASONS TO CHOOSE INTRA CALFEROL

- ✓ Unique all-in one formulation targeting good skeleton and egg shell formation
- ✓ Contains phosphorus releaser to increase the bioavailability
- ✓ Stable, well-emulsified vitamin D3 for optimal uptake
- ✓ Fortifies musculoskeletal integrity
- ✓ Supports the formation of high quality egg shells and yolk colour

The amount of vitamin D3 in 10ml Intra Calferol equals roughly **30 MIN.** of sunlight exposure

A hen lays about 250 eggs yearly which is **20 TIMES** the quantity of calcium in her bones

Approximately **35%** of broiler flocks face abnormal bone development causing economic losses

BETTER POULTRY WELFARE DUE TO LESS GAIT ABNORMALITIES

Intra Calferol is a drinking water based supplement within our **Intra Nutrients Programme**. Benefits of this programme includes precision nutrition and continuous supplement intake via drinking water and ease of use via flexibility of dosing.

Nutrition • Science • Innovation

COMPOSITION

CALCIUM

- ✓ Improves egg shell quality and formation of skeleton
- ✓ Chelated organic Calcium

VITAMIN D3

- ✓ Is key for homeostasis of the calcium metabolism
- ✓ Ultra stabilised

MAGNESIUM

- ✓ Important for structure of bone tissue and egg shell strenght
- ✓ Chelated organic magnesium

PHOSPHORUS RELEASER

- ✓ Improves uptake of phosphorus in feed

INSTRUCTIONS

LAYERS AND PARENT STOCK

DOSAGE

1 litre per 1000 ltr water

Preventive

Administer one day a week

Treatment

Administer for consecutive 3 till 7 days in case of poor egg shell quality

BROILERS

DOSAGE

1 - 2 litre per 1000 ltr water

Preventive

Administer for 3 days in the 1st and optional 2nd week.
For all following weeks 1 day/week

Treatment

Administer 3-5 days a week

TOOLS

FLEXIBLE DOSING

Easy blending combinations to tackle multiple issues

With the 3 Intra Nutrients (Intra Calferol, Intra Aqua Acid Mineral and Intra Aerosol) all combinations are possible.

Intra Hydrocare can be combined with Intra Aqua Acid Mineral and Intra Aerosol, not with Intra Calferol.
